CEMENT

Cement belongs to the category of hydraulically-bound mixtures, i.e.: those materials which, when mixed with water, form a paste that hardens progressively to create compact blocks that are resistant to the action of water and boast significant mechanical resistance properties. The main component of cement is clinker, obtained from natural raw materials such as limestone and clay, which are crushed, ground and then fed into kilns for roasting. When it leaves the kiln, the clinker is first cooled and then sent to the next phase for grinding in mills, after other selected ingredients are added, including gypsum, blast furnace slag, fly ashes, pozzolan, limestone, etc. All these ingredients are ground together to produce a homogeneous powder: cement.

BODOVA LTD.

CEMENT

Cement Types:

- Portland limestone CEM II / B-L 32.5 N
- Portland Cement CEM I 42.5 N
- Portland Cement CEM I 52.5 N
- Sulphate Resistance Portland cement CEM I 42.5 N – SR5
- CEM TYPE I ASTM C 150
- CEM TYPE II – ASTM C 150
- CEM TYPE V – ASTM C 150
- CEM TYPE II / A-S 42.5 N
- Portland slag cement CEM TYPE II / B-S 42.5 N
- Blast furnace cement CEM III / A 42.5 N

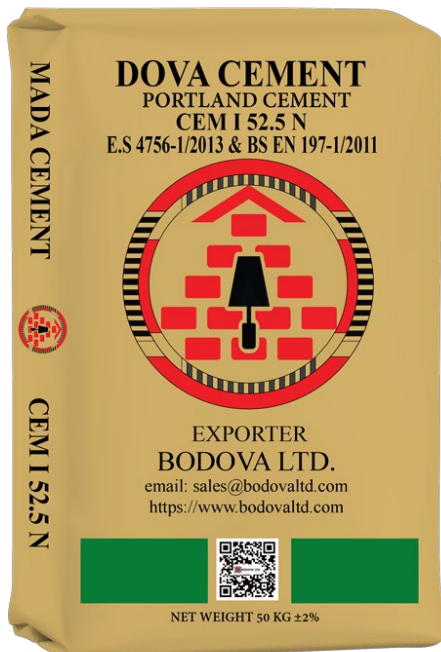

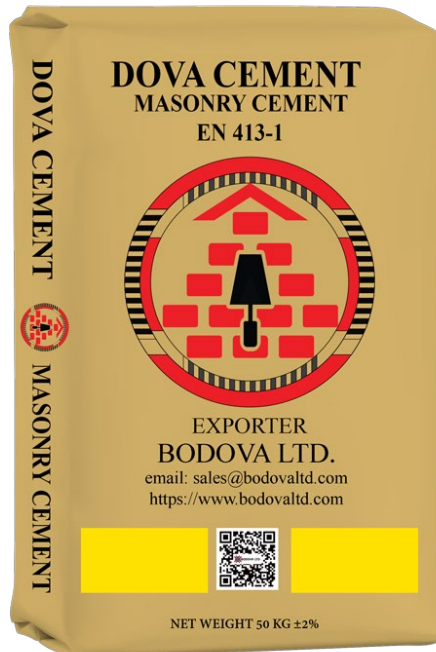

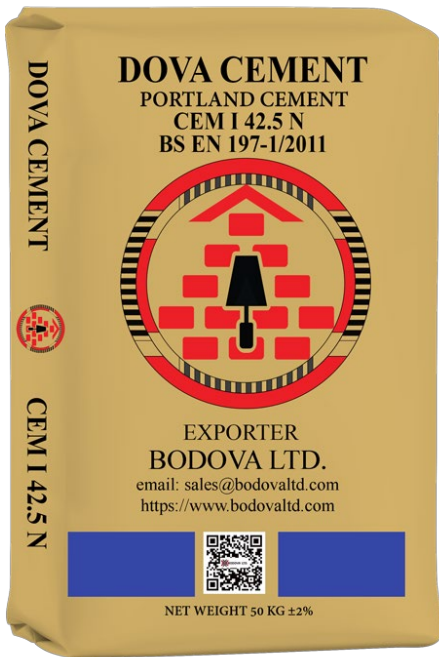

BODOVA LTD.

CEMENT CLINKER

The core ingredient in producing cement

All types of clinker including:

- CEMENT CLINKER 32.5 N
- CEMENT CLINKER C3S > 60
- CEMENT CLINKER 42.5 R
- CEMENT CLINKER 42.5 SR5
- CEMENT CLINKER 52.5 N
- CEMENT CLINKER 42.5 N
